DENTAL FLOURIDE TREATMENT		
For young dogs whose permanent teeth are fully developed strengthen enamel and resist tooth decay. We do not use floor mouth surgery, or who have heavy tartar. Additional cost	luoride in cats or in dogs who need dental extractions	
I would like my pet to receive a fluoride treatment.	Initial	

PAIN MANAGEMENT:

Pain control will be provided for all patients that have procedures known to cause discomfort. These include spays, orthopedic surgery, abdominal surgery, etc.. We give pain medications during surgery, which last for a few hours. For painful procedures, we will give an oral or injectable pain medication which can last for about 24 hours. The additional cost for this medication is \$6.30 to \$35.00, depending on size. In severe pain situations, we may deem it necessary to dispense oral pain medications, which may vary in price. The Doctor can advise you what may work best for pain control for your pet's procedure. If you have questions, be sure to discuss the options with the Doctor.

I understand that pain medication will be dispensed for my pet if deemed necessary and the cost may vary slightly

depending on my pet's needs.	Initial
